

HYDRATE YOUR PLANTS: CREATE A PLANT PLAN FOR YOUR HOME

Step one: Site sketch

On a blank piece of paper, roughly sketch your yard and home, indicating the approximate locations where you currently have trees and plants.

Step two: List existing features and vegetation

Based on your site sketch, make a list of major features (patios, walkways, etc.) and vegetation on your site. Identify any potential benefits that they provide to your site.

Existing Features & Plants

Feature/Plant name	Location on site (N/E/S/W side)	Function/benefits

Step three: Site goals

List 3 goals you would like to keep in mind when adding plants to your site. These could include: providing shade, attracting pollinators, improving soil quality, creating a desert aesthetic, reducing water use, enhancing curb appeal, etc.

1. _____ 2. _____ 3. _____

Step four: Add new plants!

Based on the information provided in the presentation, what plants would you like to add to your site, where will you plant them, and how much space will you need? You may want to add these to your site sketch.

New Trees & Plants

Plant name	Location on site (N/E/S/W side)	Size at Maturity	Function/benefits
