

Composting Toilet Pilot Project: Seeking Participants

Are you...

- » Interested in **building a composting toilet** for your home?
- » **Tired of flushing potable water** down the toilet?
- » Interested in **extreme composting and improving your soil**?
- » **Becoming a soil steward and advocate** for soil fertility?

Date: Thursday, February 9, 2012, 6-8pm
Location: St. Marks, 3809 E 3rd St, Tucson
RSVP to: Catlow Shipek
catlow@watershedmg.org or 520.396.3266x1

Watershed Management Group (WMG) invites you to a free informational session to learn how you can participate in a pilot research project to build and use an approved, site-built, composting toilet at your home.

Attendance at this session is required to apply to participate in the pilot project. Limited financial subsidies will be available to pilot participants.

Information covered will include:

- » An overview of composting toilet designs (site-built) and proper use
- » Permitting and legalities for installing and using composting toilets
- » How to apply to receive a subsidy and be a pilot participant

Closing the Nutrient Loop – A Community Desert Soils Education and Action Program

Watershed Management Group and community partners are taking a fresh look at how we as a community can turn our wastes into resources to improve productivity of our desert soils. Through the composting toilet pilot project participants will be able to attend workshops and activities to become effective soil stewards. Soil stewards will learn about: soil nutrient cycling, soil food webs, extreme composting, and more.

This program is funded through a grant received from U.S. EPA by WMG to address the environmental issues of soil nutrient loss, food security, waste reduction, and water conservation.
